

A COMPREHENSIVE EDUCATIONAL SYSTEM

The graphic above represents the “layers” of a sound educational system intentionally focused on the development of the whole child. Above all, literally and figuratively, is the Student Experience. Each of the systems below provide supports for the student experience, from support systems designed to assure that each student can be successful, to clear and measurable curriculum outcomes. Supporting the system is professional capacity, the people who work together with professional knowledge and collegial relationships. Of course all of this exists in the context of community and parents playing a strong supportive role for the school program.
